Mark Weeden

Hittite Scribal Schools Outside of Hattusa?

Abstract
The article investigates the meagre textual evidence for Hittite scribal schools outside of Hattusa against the background of new excavations and the questions they raise about the social context of Hittite cuneiform writing. The use of the term é.dub.ba(.a) in Late Bronze Age Anatolia by contrast to Middle Bronze Age Babylonia is briefly touched on, and the institution of the é giš.kin.ti at Karahna is compared with that at Hattusa.

Keywords: Scribal school, Boğazköy, Ortaköy, Maşat, social context of cuneiform writing, temple.

Cuneiform among the Hittites

Only in recent years has the study of Hittite school institutions and programs begun to gain momentum. Special mention should be given to the studies of Giulia Torri concerning the distribution of text-types and writing personnel recorded on tablets in the lower-city at Hattusa, especially the Haus am Hang, and also to those of Shai Gordin, investigating the prosopographical relationships between individual scribes and the possible institutional frameworks for such relationships. In these cases the focus has thus far been on the Haus am Hang and the possible é giš.kin.ti in the Südarea south of Temple I, which have both been held to have been scribal schools or scriptoria within the city of Hattusa.

At the same time the text-finds from sites other than Boğazköy are beginning to multiply, prompting consideration of the social and geographic distribution of Hittite cuneiform writing in Anatolia, although this must be said to be a process that is in its infancy due to the current state of finds and/or publication. In the following I would like to consider evidence for Hittite scribal schools outside of Hattusa. It has to be said that there is currently not much published evidence, but it is not too early to begin the discussion. I will consider direct references to scribal institutions as they are found in available cuneiform texts, and I will concentrate on the texts of the central Anatolian area, as these

* The article has benefited from comments gratefully received from Joost Hazenbos and Jared Miller of the editorial board at AoF.
1 Torri (2008; 2009); Gordin (2010; 2011).
present a unified whole, with strikingly uniform sign-forms and regularity of sign-values. So unified is the script of finds of Hittite texts from outside Boğazköy in central Anatolia, that one might assume a centralised education in writing.

Hittite texts from Syrian centres such as Alalakh, Emar and Ugarit frequently present anomalies in orthography, phonotactics and script which are not to be found in texts from the Central Anatolian Area, oddities which may in large part be due to the influence of local scribal traditions, possibly dominated from the Hittite chancellery at Karkamiş. This also applies to the *Sammeltable* of texts “made in the manner of Arusna”, that Jared Miller has recently presented at two conferences. It displays numerous orthographic peculiarities not otherwise found at Hattusa, some of which may be explained as being the result of school traditions closer to those found in Syria. Much further research is needed on this topic.

It can be argued that a fundamental sociological difference exists between the Hittite use of cuneiform and that of neighbouring cultures in the Ancient Near East, most starkly, although slightly artificially, when compared with the social context of writing during the Old Babylonian period in Mesopotamia. While Old Babylonian cuneiform writing was to an extent at least embedded into city life, with schools at Nippur and Ur apparently being held in private houses, or teaching being done in the student’s own home, Hittite cuneiform writing tended to be a state affair. Here we have learned to be very careful when talking about public versus private institutions in the ancient world, certainly for the Old Babylonian period it is frequently not a distinction that makes a great deal of sense.

However, the temple and palace archival context of Hittite cuneiform from Hattusa stands in marked contrast to the domestic urban context of Old Babylonian Mesopotamia. This anomaly is paralleled by the types of texts available (figure 1), the lack of economic texts in Hittite cuneiform representing a contrast to the relatively widespread finds of economic documents in family domestic contexts in Babylonia. Hittite cuneiform, in the archives that have come down to us, is inextricably tied to the needs and survival of the extended royal family that constituted the Hittite ruling class. This finds expression in the types of texts written and archivised: rituals, festivals, omens, diplomatic texts, literature.

The aristocratic bias also finds expression in the geographical distribution of the places where we find Hittite cuneiform. Hittite cuneiform appears in those places which were of

---

2 See O. R. Gurney’s suggestion of a local Hittite scribal style at Alalakh (AIT 454) apud Wiseman (1953: 117–118). The most striking grounds for this suggestion are the use of the sign-value *li* in a Hittite word (*ḥa-li-ši-šī-ir* AIT 454 ii 19), unattested at Hattusa, and the writing *a-li-liš-ia-an* (ii 35) for usual *a-al-li-ia-an*. The palaeography of AIT 454 is entirely Boğazköy, however (Gurney loc. cit. 116). For further Hittite tablets from Alalakh, see Niedorf (2002); Hoffner (2009: 372–374).
3 For the Hittite tablet from Emar see Hoffner (2009: 367–368).
5 Miller (2011); Miller forthcoming. I am grateful to the author for a pre-publication copy of this.
6 Miller (forthcoming) draws attention to the use of *li*, for example, which is also attested at Alalakh (see above, fn. 2).
7 Weeden (2011a: 598–600).
historical strategic importance to Hittite economic and military interests and which thus found themselves on the circuit of towns visited by the king during festivals. We could almost make a rule: where we do not find royal seals, we do not find cuneiform writing. Maṣathōyûk, Ortakûy, Kuṣaklı, Oymağâç, Kayalûpınar, all yield seal-impressions if not of royalty then at least of officials close to royal circles. If Oymağâç is Nerîk, Kuṣaklı is Sarissa, and Kayalûpınar is Samuha, then we know that Hittite kings visited these places. Where we do not find any evidence of Hittite cuneiform writing, Kaman-Kalâhöyük for example, we do not find evidence of any royalty among names preserved on seal-impressions there. Of course this is a rule based on a silence that can only too easily be broken by the appearance of new evidence.

10 A. Süel (2009: fig. 7, fig. 15) for Tabarna seal-impressions; ibid. fig. 9 and M. Süel (2008: 474) for a mould with royal design (Tudhaliya and Taduhpepa); numerous excellently preserved seals of officials have also been found at Ortakûy.
11 Müller-Karpe (2002: 335f.). Kuṣaklı-Sarissa was visited by the king is clear from the find there of tablets of the Sarissa festival (CTH 636), see Wilhelm (1995: 39f.); Hawkins (2006).
12 At Oymağâç/Nerîk no royal seals have been found thus far, although a sometime royal presence is undeniable if the identity with Nerîk is in fact correct, and cuneiform has most certainly been found there (Czichon 2009: Plate IV Abb. 13–14; van den Hout 2010: 265). A known official, Sarini, is attested on a seal impress. See J. Klinger in Arbeitsbericht 2006.05 (Philologie), www.nerik.de.
14 Yoshida (1999; 2006); Weeden (2010); Kaman-Kalâhöyük has yielded the largest cache of hieroglyphic seal-impressions outside Boğazköy. There are no royal seals among them. An Empire-period tripod seal from Kaman-Kalâhöyük attests the name Kumma/iyaziti, known from Boğazköy and Alalakh, although it is not clear if this is the same person; Yoshida (1994).
15 While we find royal seals of non-Hittite kings at Korucutepe (Güterbock 1973a), cuneiform writing was not found there, as L. d’Alfonso points out to me. Excavation was only conducted for three seasons, however.
The recent (2010) excavation of a fragmentary cuneiform tablet dated to the 14th century at Büklükale, 40 km to the north-east of Kaman-Kalehöyük on the western bend of the Kızıl Irmak, is interesting in that it appears to be part of a royal letter. One would not expect Büklükale to have been on the king’s festival circuit, so the appearance of a cuneiform tablet there might otherwise have weakened the view of Hittite cuneiform presented here. I realise that there are numerous problems with this model. Nini, the scribe of the donkey-house attested on a seal-impression from the Nişantepe corpus, the “scribes on wood” attested in cuneiform documents, do they really fit into such a picture? This question becomes all the more acute given Th. van den Hout’s recent interpretation of the “scribes on wood” as “clerks”. Furthermore, a diachronic perspective provides us with a more differentiated picture. In the late Middle Hittite period the genre of letter-writing using cuneiform on clay appears to be far more widespread than it is in the Empire period. Dignitaries and officials of the Hittite state wrote to each other on a range of issues including personal ones, although these are usually restricted to the so-called piggy-back letters, or postscripta, which accompany the main letter. However, I would maintain that the practice of writing even in these contexts is conditioned by the direct proximity of said individuals to royal circles and their engagement in military or civil activities with a broad royal mandate. This is doubtless a view of Hittite cuneiform that not everyone will accept, but it is important that I make it clear by way of preface to the following considerations.

A Scribal School at Ortaköy?

The largest published find of cuneiform tablets outside of Hattusa is currently still that of Maşathöyük near Zile, plausibly identified with Hittite Tapikka. The main find-spots are in rooms 8 and 9 of the citadel and the columned hall beside these, thus indicating that the tablets were probably kept on an upper floor from which they fell. Little can be said about the distribution. The majority of the administrative texts were found in room 8 and in the columned hall outside. This is possibly enough to indicate that there was originally an order of some kind, but we are unlikely to ever know what it was.

That at least the notion of a scribal school was current to the Hittites is shown by the logographic terminology they chose to denote the instrument used to write cuneiform, the stylus. A tablet from Maşathöyük, the postscripted letter from the scribe Tarhumîya to the

---

16 This tablet will be published by the excavator, K. Matsumura, in collaboration with the author.
20 Gordin (2010: 160–161, 170) offers a potentially different view of the social context of cuneiform scribes.
scribe Uzzu asking him to send a writing stylus because his own is broken, uses a singular form of Sumerogram for this item:

HKM 71 left edge: (1) GI É.DUB.BA-[m]u-[k]án ḫar-ak-[t]a (2) nu-му ŠEŠ.DUGH.GA-[I]A G[t] É.DUB.B[A] up-pí

“My stylus is broken, send me a stylus, my dear brother”.

The usual Mesopotamian logogram for stylus is GI DUB.BA, “reed of the tablet”, rather than GI É.DUB.BA, “reed of the tablet-house”, which makes this an intriguing Hittite misunderstanding. Without the institution of the scribal school, it would have been difficult to make this mistake. Why Tarhunmiya, based in Hattusa or Sapinuwa, should ask Uzzu, based in Tapikka, to send him a stylus, is unclear. One might assume that Tarhunmiya has some sort of personalised stylus, indeed, probably made of metal, and that he was currently not in any of the other major cities, possibly being on a business trip with his superior, the GAL LÛ.MES. Potential bronze styluses have been found at Hattusa, although their precise mode of usage is disputed, and also at Ortaköy, where the stylus, if it is one, is made of gold.

A silver stylus, again called a GI É TUP.PI, with a semi-Akkadographic writing of É.DUB.BA, is mentioned in the ritual for the ancient gods (CTH 492): GI É TUP.PI KÙ.BABBAR IŠ-[…] KUB 17.20 ii 25. It is mentioned in a series of silver items that are to be placed in front of the statues of particular gods. Which god the stylus is to be placed before is not entirely clear. Two lines before, there is also mention of a LE-ĔH-E KÙ.BABBAR ZL.ÎN.BAR [KÙ.BABBAR?], “writing board of silver, stylus [of silver?]”. This context prompted O. R. Gurney to suggest the translation “stylus” for this attestation of Hittite sepikkusta/logographic ZL.ÎN.BAR, otherwise usually translated as “pin”, and I have further suggested that this may be the term for a hieroglyphic stylus as opposed to the cuneiform stylus that would here be the GI É TUP.PI. If this is correct, not only do we have good evidence, both archaeological and philological, for the stylus made of metal among the Hittites, but it would also appear that the stylus specifically used for cuneiform was named after the institution where cuneiform was learned: the Edubba.

The one explicit mention of a writing school, using the typical Mesopotamian logogram for the institution in a strikingly archaic form, is attested on a tablet again probably found...
at Maşathöyük\textsuperscript{31}. The letter is addressed from one Tarhuntissa to one Palla and contains the following sentence:

\textit{ABoT 65 rev.}

\begin{verbatim}
nu ha-an-da-an A-NA m\textsuperscript{2}A-TI-U-UN-NA I-NA \textsuperscript{9}k\text{-i\textasciitilde}s\text{-\textasciitilde}a-an me-ma-ah-

hu-un A-BU-KA-wa-mu-u\text{-\textasciitilde}s\text{-\textasciitilde}a-an \textsuperscript{10}e\textit{g}ir-an-p\text{-\textasciitilde}t ki-i\text{-\textasciitilde}t-ta-ri e\textit{g}ir-an ar-ha-wa-ra-
a\text{-\textasciitilde}s\text{-\textasciitilde}mu \textsuperscript{11}\textit{U\text{-\textasciitilde}UL} nam-ma ne-e-a-ri
\end{verbatim}

“And I spoke thus directly to Atiunna in the Edubba: Your father is right behind me, he will not turn away from me, will he?”

The translation follows the spirit of H. C. Melchert’s interpretation of \textit{appan=pat kittari}, giving a positive rather than negative slant to the relationship between Atiunna’s father and Tarhuntissa. This is contrary to all other translations, but the issue is of secondary importance for present purposes\textsuperscript{32}. Important here is the clear use of \textit{\textsuperscript{\textasciitilde}DUB.BA.A} as the location of a physical conversation.

Two questions need to be addressed here: i) what is this \textit{\textsuperscript{\textasciitilde}DUB.BA.A} and ii) where is it? The question of where is answered most succinctly, if not completely securely. The tablet is supposed to have been found at Maşathöyük. This is slightly problematic, as the addressee is not otherwise known from the Maşat corpus. Clearly ABoT 65 was not sent from Hattusa, as the author makes clear:

\textit{Obv. (6) A-NA m\textsuperscript{2}GIS\textit{gidru-dingir-lim} ku-\textit{it} \textit{U} A-NA \textsuperscript{4}30-LU (7) a-a\text{-\textasciitilde}s\text{-\textasciitilde}tu-\textit{ul} ha-at-ra-
a\text{-\textasciitilde}s\text{-\textasciitilde}\textit{e} (8) na-\textit{at} \textit{U\text{-\textasciitilde}UL} ka-a (9) m\textsuperscript{2}GIS\textit{gidru-dingir-lim-in} ta-pa-a\text{-\textasciitilde}s\text{-\textasciitilde}i-e-et ku-\textit{it-ki}
(10) nu \textit{\textsuperscript{\textasciitilde}UR\text{-\textasciitilde}U} ha-at-tu-\textit{si} pé-en-ni-i\text{-\textasciitilde}s

“As for the greeting-letter you wrote to Hattusili and to Armaziti, they are not here. Something tapassiya-ed Hattusili\textsuperscript{33} and he drove off to Hattusa.”

Hattusili was an important official who may have been the \textit{gal dub sar\textsuperscript{MES}} otherwise known from Hattusa and from Maşat-correspondence\textsuperscript{34}. F. Imparati has also argued that

\textsuperscript{31}For the rich literature on this tablet see Marizza (2007: 120 fn. 8); Hoffner (2009: 242).

\textsuperscript{32}Melchert (1979: 60); the alternative translation, which puts a negative slant on this phrase (e. g. folgt mich“ Rost 1956: 347) is primarily argued on the basis of the occurrence of the idiom \textit{appan\textasciitilde}kittat in KUB 14.1 obv. 1–2, where it denotes the clearly hostile activity of Attarissiya towards Madduwatta. See CHD P 144; Hoffner (2009: 386 fn. 193) “keeps after me”. This evidence and the consensus that has grown about it (additionally Güterbock 1944: 400; Hagenbuchner 1989: 176; Houwink ten Cate 1998: 175–176) is impressive. The only difference between the phrase in Madduwatta and the phrase here, apart from the tense, is the use of the particle -\textit{kan} (KUB 14.1 obv. 1) as opposed to -\textit{san}. It is possible, however, that “lying behind” someone could have both a positive and a negative implication. Note the entirely positive \textit{appan tiya- “stand behind, support”}.\textsuperscript{33}

\textsuperscript{33}This verb is plausibly interpreted as a word describing illness, e. g. “fever”, taking the accusative of the person who is ill; Houwink ten Cate (1998: 176 fn. 22); Hoffner (2009: 245). That a fever should be grounds for undertaking a three day journey from Ortaköy (see below) to Hattusa is unlikely, however.

\textsuperscript{34}Beckman (1995: 25); Houwink ten Cate (1998: 158); de Martino (2005: 311); Marizza (2007: 119–127) for a thorough, cautious but inconclusive appraisal of the evidence that the high official Hattusili of this period is to be identified with the contemporary \textit{gal dub sar\textsuperscript{MES}}. For a different tentative identification see Klinger (1995: 90).
letters from Maṣat in which Hattusili and others refer to the “Palace” (é.gal-lim) most probably mean Ortaköy-Sapinuwa, the regional seat of government or temporary capital. This makes it very likely that the “here” in ABoT 65 obv. 6 referred to Ortaköy-Sapinuwa as the origin of the letter. I would also assume that this means that the conversation referred to in the Edubba would have occurred in the place that Tarhuntissa is writing from.

Several of the Maṣat-letters were most likely sent from Ortaköy-Sapinuwa, especially those written by Piyama-Tarhu, a scribe known from Ortaköy, or those sent by Sarpa, a scribe who appears to be operating from Sapinuwa according to evidence from Maṣat. Furthermore there is evidence from the excavations at Ortaköy that the “Chief Scribe”, although unnamed, both sent letters to scribes at Ortaköy, including to the aforementioned Piyama-Tarhu, and himself received letters there from elsewhere. This fits perfectly with the activities of Hattusili attested in ABoT 65: he would be moving between Sapinuwa and Hattusa.

What Kind of School?

That there should have been a physical scribal school known as the é.dub.ba.a in 14th century Anatolia is surprising in the first place. Recent research has tended to the opinion that the typical Edubba-school of Mesopotamia only existed in the Ur III period, while the Old Babylonian textual attestations of such places, in the so-called Edubba-texts, which include descriptions of life in an extensive school-type institution, exclusively refer to a semmythologised literary construct of an age long-gone. This conclusion is based on the archaeological contexts of buildings containing school-texts in Mesopotamia: the House F in Nippur area TA and the House of Ur-Utu at Sippar-Isin, which are clearly family dwelling places as opposed to larger communal institutions. A house associated with scribal education at Ur is also domestic, but its inhabitants were apparently connected to the nearby temple of Nanna, the Ekišnugal. What is this é.dub.ba.a doing here in early 14th century Anatolia?

In fact, at least one Old Babylonian letter does refer to an é.dub.ba.a as a concrete space. The OB letter AbB 3.84, from the Lagaba collection, makes it clear that teaching in the OB period could take place in the student’s home, or more precisely their parent’s home, while

36 Beckman (1983b: 97 fn. 2) assumes the opposite from this attestation: the Edubba was in Hattusa. This implicitly assumes that there could only be one Edubba.
37 For Piyama-Tarhu at Ortaköy see A. Süel (2008: 464); for Sarpa in Sapinuwa see Alp (1991: 92); he is not mentioned in connection with Ortaköy in A. Süel (1995); also Houwink ten Cate (1998: 174, with caution in fn. 21).
40 Robson (2001); Tanret (2002).
42 Compare for example the view that the rare mentions of the Edubba’a after the OB period are “nicht mehr als Reminiszenzen an eine vergangene Epoche”; Volk (2000: 4).
testing took place somewhere called the é.dub.ba.a. This may well have been an as yet unexcavated communal school. However, it is just as likely on the albeit meagre basis of the archaeology of OB schools, that é.dub.ba.a in this text refers to the teacher’s house, designated as an Edubba as a term of deference.

In the case of the Hittite attestation we have further to be aware that there may have been confusion between the writing é.dub.ba.a and the otherwise attested é tuppas, which H. Otten has argued to be an administrative institution. The problems inherent in the uses of these similar terms are well illustrated by the dilemma posed in the only other attestation known to me in Hittite texts of the logogram é.dub.ba referring to a place.

An offering list from the an.tah.šumSAR festival refers to offerings to be made “to the stag-god (protective deity) of the king and to the (divine) throne of the é.dub.ba.” It is possible that the mention of these two divinities together indicates that we are dealing here with an é.dub.ba on Büyükkale, the royal citadel itself. The tablet is written in the latest form of Hittite cuneiform, NSc, and is thus to be dated to the 13th century, although the material treated within it, as well as aspects of the language, can be assumed to go back to Old Hittite traditions. One cannot exclude, however, that é tuppas, “magazine”, is meant here. The writing with BA and not PA, as well as the position of the enclitic connective =a may speak against this, but é tuppas appears to be how the fragment of a duplicate manuscript understood the text. The identification of a royal é.dub.ba on Büyükkale on the basis of this text alone is thus dubious.

However, although we should be careful to admit the possibility of mistakes in the use of logograms by Hittite scribes, it is reasonably safe to say that the é.dub.ba.a in ABoT 65 is in fact a scribal school. The writing with the extra A is typical for this Sumerian word in Mesopotamia. Two of the Mesopotamian school exercises known as Edubba-texts are also known from Hattusa inscribed on prisms, at least one of which has been thought to be an import, although this is hard to tell without collation.

The reference to “your father” in ABoT 65 has been interpreted as a reference to the master of the scribal school. It is frequently assumed that teacher-pupil relationships are expressed in Hittite by familial terms, just as they were frequently in Old Babylonian Mesopotamia. Houwink ten Cate saw ABU=KA as a reference to Hattusili, the Chief

43 AbB 3.84: 6–16 concern instruction in writing in the parental home; ibid. 18–23 concern testing in the Edubba. See Weedon (2011a: 599).
44 Weedon (2011a: 599–600). For further OB examples of teaching at home, see Volk (2000: 8 fn. 41). This is not to say that teaching in the OB period was not conducted in temples and palaces – see Volk loc. cit. 6 fnn. 28, 29, but they don’t appear to have been specially constructed schools.
47 Cursorily Melchert (1977: 82).
48 KBo 45.27 obv. 7: [é tupp-]pa-aš-ša GIS DAG-ti. The copy leaves very little room for these two signs.
49 For further evidence of scribal practice on Büyükkale, see S. Gordin’s contribution to this volume.
50 Volk (2000: 3).
Scribe, who dominates the narrative on the reverse of the tablet. It may be possible to view the use of $ABÙ=KA$ as a term of deference towards a teacher, although this would be unparalleled outside of greeting formulae. However, if Tarhuntissa had wanted to refer to his own and Atiunna’s teacher in the $É.DUB.BA.A$, he might have referred to him as $ABÙ=NI$, “our father”.

If Hattusili is in fact the father of Atiunna, both Atiunna and Tarhuntissa are having this conversation in the $É.DUB.BA.A$, which is either a communal institution or Hattusili’s own residence at Ortaköy. Even if one assumes that Hattusili must have been primarily resident at Hattusa, it is quite possible that he may have had a second house in another town, or that the boundaries between domiciles and places of work in various towns will have been fluid for this important official. I would tend to the conclusion that this institution was in fact his abode in Ortaköy. Why else would the location of the conversation be discourse-relevant to the fact that Hattusili is Atiunna’s father, if the $É.DUB.BA.A$ is not also Hattusili’s house?

**Scribes’ Houses as Institutions**

The distribution of senders and recipients of the Maşat letters, including postscripta or so-called piggy-back letters, has been used by Th. van den Hout to demonstrate the tight archival and thus most likely chronological coherence of the Maşat epistolary corpus. A specific breakdown of the distribution of the addressees of the postscripta is additionally useful, as it shows a distinct bias (figure 2). The status of Uzzu as the main scribe connected to the archive found at Maşat is shown by the fact that he receives far more of the so-called piggy-back letters than are received by any other individual, fifteen in total. These additional letters, written onto the ends usually of other people’s letters, are particularly revealing. If someone wanted to write to Uzzu, it is clear that they would find him by appending a post-script to a letter to someone in Maşat. In the cases of other officials, particularly those higher-ranking, such as Himuili, it is clear that they were frequently away, although Himuili himself receives the second largest share of postscripta. It is also interesting that Tarhunmiya writes five of these postscripta, again more than anyone else.

We know that Tarhunmiya had a house in Maşat, as several letters attest to the damage being done to it in his absence by the locals, a correspondence sometimes referred to as the “Tarhunmiya Affair”. Apparently the local administration is imposing saḫḫan and luzzi taxes on the property, people are using his chariot and breaking it, things are not going well. Hattusili the chief scribe (?) takes Tarhunmiya’s side and writes to the $LÚ.BÊL.MAD.GALTI$ at Maşat, Himuili. The way he refers to Tarhunmiya’s house is intriguing (HKM 52):

---

54 Houwink ten Cate (1998: 176).
In your administrative area there is only one scribe’s house, and others in your town are doing damage. (Is there) saḫḫan and luzzi for scribes? So why is he paying it there?"

This sounds as if Tarhunmiya’s property is not only his personal residence, but also possibly an office of some kind, that it had a public function over and above being someone’s personal property. There is some dispute as to whether he is not supposed to pay taxes for this reason, i.e. because his house is a scribal house. Ph. Houwink ten Cate and Th. van den Hout suppose that his tax-exemption is due to his having a house elsewhere, in Hattusa. HKM 12, in which Tarhunmiya may be being arrested, is of questionable use as evidence in this connection. The tablet is very broken, and the use of the verb e-e[p], the reading of which is not clear following the traces copied by Alp, does not necessarily have to be an office of some kind of public function.

Fig. 2: Breakdown of Postscripta on Maṣat letters according to letter number in S. Alp (1991). Recipients on vertical axis, senders on horizontal.

---

order to arrest him. It could merely be an order to summon him, possibly in connection with this affair, or another, or even at the beginning of his service rather than at the end.\(^60\)

A public function for the house connected with the scribal profession may explain why Uzzu send the writing-stylus from Maṣat. Certainly, while he is away, the house appear being used, which is part of the context for the law-suits and squabbles Tarhunmiya is involved in. Quite possibly the styluses that Tarhunmiya used were in his house, and one assumes that Uzzu had access to it. Is the house in fact being used as a scribal centre of some kind? This would also explain why the residences of other individuals, who were also patently scribes at Maṣat, including Uzzu, would not have their residences referred to as “Scribe’s Houses”, if Hattusili says there is only one of these there.

A further piece of evidence concerning Tarhunmiya’s house is contained in a postscript to a letter from the scribe Sarpa, who operated out of Sapinuwa, that is also concerned with the Tarhunmiya Affair. It is assumed that the postscript is from Tarhunmiya, even though he does not name himself, because his father is the addressee:

HBM 60:
(27) A-NĀ mPAL-LA-AN-NA A-BI-DŬG.GA-IA (28) Ū A-NĀ ṮA-AN-NI-I (29) NIN.DŬG.
GA-IA QĬ-BĬ-MA … (34) aš-šu-ul-mu ḫa-at-re-eš-kat-tēn (35) na[m]-ma-aš-ša-an
A-BI-DŬG.GA-IA (36) ḪA-AN Ė-Ĕ-I G:\HĬA-\WA (37) ḫa-ak

“To Pallanna, my dear father, and to Manni, my dear sister, speak … write a greeting to me. Furthermore keep an eye on my house, dear father.”

It is difficult to know what to conclude from this, whether Tarhunmiya’s house is identical with his father’s or whether it is a separate building. If the latter is the case it is possibly relevant that Tarhunmiya’s father does not seem to have been able to read, as he needs a letter read out to him by Uzzu\(^61\). The paternal house would thus not necessarily be a “scribe’s house”.

Another use of the term “house of the scribe”, found in a cult inventory text from Hattusa, may refer to a semi-public institution, at least a place for the storage of tablets:

\[\text{[I-N]}\] Ė DUB.SAR EZEN₄ MES₃ …/ Ū-UL ku-i-e-eš-qa ḫa-a-en Bo. 3295 rev.\(^7\) iii 6′.

“We did not find any festivals in the house of the scribe …”

Tarhunmiya’s residence at Maṣat is unlikely to have been the central tablet storage facility, however, because the archive at Maṣat is not found in a residential space. This may of course be an accident of discovery.

Thus far we have an Ė DUB.BA.A which is possibly in Ortaköy and is either a communal building in a royal city or is a second residence of Hattusili the “chief scribe” which was

---

\(^{60}\) HWb\(^2\) E 55 lists peaceful attestations of ep- with a human or divine object, albeit relatively few. The obscure injunction to the king of Ahhiyawa at KUB 14.3 iii 1 is possibly a friendly use of ep- with regard to Piyamaradu, given the context that the Hittite king is trying to organise a rendez-vous with him; Seš-Ia₄ an-za₄-an ha-an-za₄ e₄ ep. Sommer 1930: 13.

\(^{61}\) HKM 81, 29–30. The demand that the parents “write back” to him in ll. 30–32 is presumably to be executed by Uzzu at dictation.
used as a school, and we have a scribe’s house in Maşat, which may have been used in a public function which guaranteed it tax-exemption.

The location of an Ē.DUB.BA.A at Ortaköy is not surprising, given that tablets have been found there in Hattic and Hurrian alongside the fragments of lexical lists, such as the piece of Ura 17. I have argued that this fragment fits well into the rest of the tradition of Ura otherwise found at Hattusa, not only from its ductus, but also from the perspective of the development of the list that it attests to, corresponding quite well to the Late Old Babylonian version, but also sharing innovative features with the first millennium version. It also appears to indicate a stage before the use of separate columns for the Sumerian and Akkadian translations, these being separated only by a Glossenkeil. It does have Hittite translations in a separate column. We should note however, that this is unlikely to have been a school exercise tablet and cannot thus be used as direct evidence of school activity.

The scribe situation at Maşat deserves further comment due to the number of scribes attested there with Babylonian names: Adad-bēlī, Ilu-tukultī, Mār-ešē. Whether these were actually Babylonian scribes, or Hittite scribes affecting Babylonian names, is unclear. In the case of Adad-bēlī at least, this is a scribe who communicates with the king himself directly. Mār-ešē is also close to royal circles. A scribe at Maşat with the Hittite name Zū is asked by Hattusili the Chief Scribe to write back to him on a particular subject in Babylonian, either so that Kassu, the addressee of the main letter, did not understand the reply, or so that Zū might practise his Akkadian language. Maşat letters also contain some evidence that Akkadograms were actually read in Akkadian: BE-LU-uš-Ša-an (HKM 52, 25 and HKM 80, 5), for example, may indicate a pronunciation of an Akkadogram in Akkadian due to requiring the sign -uš- to preface the Hittite particle -san. There are unusual writings of Akkadian words or Akkadograms such as AR-KI (HKM 106, 4; 107, 13) EĞİR-KI (HKM 108, 8, 9), as well as unusual Akkadian words: KUS-GA-AN-TI (HKM 107 obv. 6’, rev. 12’), SÌ-E-SAR-RU (HKM 108, 6). Clearly Akkadian as the language of scholarship was flourishing at this small provincial centre.

---

65 PA-BI-LA-Ú ha-at-ra-a-i (HKM 72, 36).
67 Has been suggested to be Akkadian dugkandu although this is only attested late (CAD K 148–149); del Monte (1995: 119); considered unlikely at Weeden (2011b: 321 fn. 1489).
68 For šaššaru “saw” (CAD Š2, 174–5), presumably here a serrated knife for cutting cloth (ŠA TA-HA-AP-ŠI). Transliterated ŠI-E-ŠER-RU at del Monte (1995), presumably on the basis of Old Assyrian šē-šēru-um (RA 58.61, 21), this could indicate specifically Assyrian influence, by contrast to Babylonian šaššaru. However, ŠER is a value, and Hittite Akkadograms do at least occasionally write A for E/L, see UZU-JA-LI-DU for šurra “afterbirth” (AHw. 1043, 1148; CHD Š2, 279), if not the other way round. See also MUNUS.MESI-SAR-TI (KUB 23.1 obv. ii 11) for (incorrect) Akkadian eserti. It would be unwise to posit Assyrian influence on the Akkadian learned at Maşat solely on the basis of this form.
Scribal Schools Attached to the Temple?

In Hattusa it has been variously proposed that the building referred to by excavators as the "giš.kin.ti in the area south of Temple I functioned as a scribal school in the late 13th century. The central reason for this proposal is the tablet KBo 19.28, which was found in a room of the complex south of the Great Temple, although a centimetre or so above the floor, detailing 205 dumu hil.a giš.kin.ti, "members of the House of Craftspeople", including 18 priests, 29 katra-women, 19 scribes, 33 scribes on wood (or clerks?), 35 exorcists and 10 singers of Hurrian on its preserved surface. Added to this we have the evidence of two officials called en giš.kin.ti ("masters of the craftspeople") who are masters of apprentice scribes.

Another giš.kin.ti must have existed at Karahna, as its staff are mentioned in an inventory found at Hattusa detailing the cult of the stag-god of Karahna (CTH 517). The tablet in question, KUB 38.12, mentions the hilamatti-officials of the temple of ḫkal of Karahna. The word hilamatta- is usually translated as "temple personnel", being the people who are concerned with the courtyard, ēhila-73, or more precisely with the ēhilammar "gate-house or portico", that which leads on to the courtyard. Here we appear to have an i-stem form, hilamatti-. The functionaries associated with this temple are further divided up with slightly obscure designations ending with the statement that the officials "of the giš.kin.ti are included for him (i.e. the god)".

KUB 38.12 i 9: LÚ;MES GUB.AN/-an-ma-aš-ši-ši-kán:
LÚ gišsukur ("spearman"), LÚ.1.duš ("gatekeeper"), LÚ gišbanšur ("butler"), LÚ gala ("lamentation-singer"), LÚ palwatallas ("clapper"), LÚ arkammialas ("lyre-player"), LÚ mušen.du ("augur"), LÚ bahr ("potter")

70. CHD § 196.
71. Zuwa and Miramuwa. See Gordin (2010: 165f., 167f.). The attestation of a similar title for Anuwanza on the basis of the broken colophon of KUB 30.26 (Gordin 2010: 164) is unfortunately not verified by photo-collation (BoFN 0632a), as the head of the horizontal is a little too high for GIS, in my opinion. The reading should not be excluded on graphological grounds, however, as the writing of the horizontals does slope down to the right on this tablet. See however G. Torri in this volume.
72. CHD P 281 assumes the giš.kin.ti here is referring to the one at Hattusa. As I see no reason for this assumption that is made explicit in the text, I assume that it refers to an institution in Karahna, whose temple of ḫkal is the subject of the inventory.
75. I take all cases of LÚ;MES hi-lam-ma-at-ti-eš in this text as representing hilamattis, nominative singular (collective), with the logical plural only being indicated by the plural determinative (i 3, 4, 6, 17). Singular grammatical construal with numbers is usual in Hittite. Line i 5 clearly has the accusative singular (LÚ;MES hi-lam-ma-at-tin ... pa-ra-a dab-ir), there is a singular predicate (dab-an-zä) in i 4, 17, and 12 (sum-an-zä) and a singular enclitic pronoun (n=as) in i 6. LÚ;MES ḫi-lam-ma-tiš in ii 19 also takes a sg. predicate, LÚ;MES hi-lam-ma-at-ta-aš in ii 4 would be genitive sg., showing an i-mutated stem. Less securely sg. is the adjective an-na-al-li-eš in i 4 and iv 15. Either these are annalis or the congruence is inconclusive. Puhvel (1991: 307), Kloekhorst (2008: 342), CHD P 111, HWb² H 590–591 all treat LÚ;MES hi-lam-ma-at-ti-eš as grammatically plural.
pa-ra+a DAB-ir

“But they took out the (following) GUB.(AN)-officials <for him> (i.e. for the god) …”

KUB 38.12 i 11: ŠU.NĪGIN 26 hi-lam-ma-at-ti-eš ša:

1 Ł(U)GUDU₁₂ ("GUDU-priest"), 1 Ł(U)DUB.SAR ("scribe"), 1 Ł(U)DUB.SAR GĪš ("scribe on wood"), 1 Ł(U)HAL ("exorcist"), 2 Ł(U)NAR ("singers"), 1 Ł(U)GISBANŠUR ("table-man"), 1 Ł(U)MUḪALDIM ("cook"), 2 Ł(U)SİLA.ŠU.DU₈.A ("cup-bearers"), 1 Ł(U)GISŠUKUR ("spear-man"), 1 Ł(U)I.DU₈ ("doorman"), 1 Ł(U)GALA ("lamentation-singer"), 1 Ł(U)pal-watallas ("clapper"?), 1 Ł(U)arkammuīyalas ("lyre-player"), 1 Ł(U) KŪRUNNA ("brewer"), 2 Ł(U)NINDA.DU.DU₈ ("bakers"), 1 Ł(U) A ŠA KUŠ.LÁ ("water-carrier")₇⁶, 2 Ł(U)KISAL.LUḤ ("cleaners"), 1 Ł(U)MUŠEN.DU₈ ("augur"), 1 Ł(U)BAHAR₈ ("potter") 1 Ł(U)E-PĪŠ BA.BA.ZA ("porridge-maker")

“(In) total (there are) 26 courtyard-officials, among whom: …”

KUB 38.12 i 17: Ł(U)MES hi-lam-ma-at-ti-eš Ł(U)MES GUB.BA′ ha ŠA É GĪš.KIN.TI-ši-kán (18) an-da DAB-an-za

“The courtyard and GUB.BA′(.HA?)-officials of the House of the Craftspeople have been included for him”.

The logograms in lines 9 (Ł(U)MES GUB an/ma-aš-ši-šि-kán) and 17 (Ł(U)MES GUB.BA′.HA) are not otherwise attested. The reading Ł(U)MES GUB-an (acc. sg. of an a-stem word) could be made less likely by the fact that the nouns palwatallas and arkammuīyalas appear in the nominative singular. This is, however, most likely a reflex of list grammar, possibly import-

76 Transliterated Ł(U).A.ḪU.LÁ at Weeden (2011b: 88), see HLZ 161 following Güterbock (1973b: 85f.). In view of the further attestations of Ł(U)MES A ŠA KUŠ.LÁ (Weeden 2011b: 556), the writing should probably not be corrected. Furthermore, my reading of the logogram in KUB 18.16 ii 1 as Ł(U).A.ḪU.LÁ-wa (Weeden 2011b: 556) should be corrected to Ł(U) A ŠA KUŠ-wa. The Sumerogram appears to have been reinterpreted by the Hittite scribes.

77 One might compare the equally obscure professional designation in hieroglyphic CRUS(?) on two Nišantepe seal-impressions, which, if correctly identified in the first place, is either ideographic or contains the syllable ar- (from ar-an “to stand” or ar-bi “to come”). See Hawkins apud Herbordt (2005: 302). In one case (Kat. 549) the sign CRUS appears in combination with AVIS₃ (L. 135.2), a possible equivalent to the Ł(U)MUŠEN.DU₈, “augur” (Hawkins apud Herbordt loc. cit.; for another possible combination of offices see Weeden 2010). Further evidence for a phonetic (rebus) usage of CRUS in the Empire Period is provided by J.D. Hawkins’ re-interpretation of the hieroglyph L. 303, used in the place name Sarissa, as expressing SARA/I (Hawkins 2006: 22). I suggest L. 303 consists of the sign sa₃ in ligature with CRUS, used with a phonetic value /ar/, which is later probably found in Hieroglyphic CRUS-RA/I (e.g. KARKAMIŠ A11a 85, Hawkins 2000: 95, 97). It is still unclear how or if this helps with the professional title on the two Nišantepe seals, or indeed with the logograms in KUB 38.12 i 9, 17. Note the translation of Ł(U)MES GUB in L. 9 as “the ‘standing-men’ at Taggar-Cohen (2006: 22). It may be that Ł(U)MES GUB.(BA′) is an ad hoc translation of the hieroglyphic professional title CRUS into cuneiform.
ed from an earlier list in which they stood in the nominative. All these terms are logical objects of the impersonal third plural in parā dab-ir.\footnote{Pecchioli Daddi (1982: 211) transliterates Lu.Mes.Gub.an-\textit{ma-\textasciitilde{a}}-k\textasciitilde{u}n from KUB 38.12 i 9 in her section on Lu.\textit{hilammattu}, but does not include Lu.Mes.Gub in the index. On the semantic obscurity of the verb phrase parā \textit{ep}- in cult inventory texts see HWb\textsuperscript{2} E 82. CHD P 111 translates “selected”; Hazenbos (2003: 105, 179) “single out, specify”, with further literature.}

Fig. 3: Photo collation of KUB 38.12 i 17.

M. Darga, the first editor of this tablet, read the logogram in i 17 Lu.Mes.Gub.Ba\^\textsuperscript{77} as equivalent logograms for the word \textit{hilammatti}-. Lu.Mes.Gub and Lu.Mes.Gub.Ba\^\textsuperscript{77} are likely to refer to the same concept, albeit not the \textit{hilammatti}-, to which they seem to form a pendant in l. 17\footnote{Darga (1973: 20). The second sign in Lu.Mes.Gub.x.Ha looks like a misformed and damaged Lu, although this makes no sense. Something has gone wrong in the execution of the sign. A photograph was collated in Mainz. Forschungsstelle Hethitologie der Akademie der Wissenschaften und der Literatur in 2007 (fig. 1). Photographs are now available at www.hethiter.net. M. Darga, of course, will have used the original tablet to form her opinion.}. They also appear to have different stem-vowels (Lu.Mes.Gub-an vs. \textit{hilammatti}-). Note that the Lu.Gub-officials are all repeated in the list of \textit{hilammatti}- officials. It appears the same tasks could be performed as a \textit{hilammatti}- or as a Lu.Gub. It is unclear whether the genitive śa ĝiš.kin.ti in i 17 refers only to the Lu.Gub.Ba\^\textsuperscript{77}.Ha officials, or to the \textit{hilammatti}- and Lu.Gub-officials together. It is likely that the -Ha is in fact the Luwian connective -\textit{ha}, thus \textit{hilammatti}-officials and the Gub.Ba\^\textsuperscript{77}-officials of the House of the Craftspeople\footnote{The translation of the logogram in line 17 as Lu.Mes.Dé.\textit{de\textasciitilde{l}}-a, as found in Pecchioli Daddi (1982: 211), and as translated by Taggar-Cohen (2006: 22) “smith of the temple gear”, is not warranted by photo-collation. The translation further shows a confusion of ĝiš.kin.ti “House of the Craftspeople” with kin.ti, the logogram for Hittite aniyatti “(temple) gear, work”. Whether the Hittites themselves were guilty of a partially related confusion with regard to these logograms is a different matter (Gordin 2010: 159 fn. 6; Weeden 2011b: 87 fn. 406), and currently unverifiable.}

Even if śa ĝiš.kin.ti applies as a genitive to both the \textit{hilammatti}- and the Gub.Ba\^\textsuperscript{77} officials there are only one scribe and one scribe on wood among all of them. It is thus clear that the staff of the ĝiš.kin.ti at Karahna is in no way comparable to what we know of the staff of the ĝiš.kin.ti at Hattusa with its 19 scribes and 33 scribes on wood, and all other professions on the preserved surface being most likely associated at least with cultic activity if not with writing: singers of Hurrian, katra-women, priests. Thus the Hittite ĝiš.kin.ti does not have to be a scribal institution \textit{per se}, as indeed it was not one outside of Anatolia, where the Sumerian term ĝiš-kin.ti clearly means simply “craftsperson” or “place of work.”\footnote{Weeden (2011b: 87 fnn. 398, 405). For the constitution of an Old Akkadian ĝiš-kin-ti see Westenholz (1987: 26f.).} This was just the form it possibly took at Hattusa, using the figure of

\footnote{Aside from the highly speculative proposal for an origin of Lu.Mes.Gub given above (fn. 77), the tablet contains several Luwian or Luwoid words (\textit{gastarhaita} i 18; hazzwi\textit{t}\textit{i}\textit{t}\textit{a} 3; p\textit{haimmim} iii 19) and exhibits some hesitancy with the use of Hittite enclitic pronouns, e.g. i 9. The i-stem of \textit{hilammatta}- may also be explained as Luwian influence (Rieken 1994 does not include a stem \textit{hilammatti}-; cf. Hoffner and Melchert 2008: 86).}
speech that described scribes as being craftspeople. This was a common conceit in the Ancient Near East.

Thus it appears that references to scribal institutions in texts show a somewhat differentiated picture between Hattusa and elsewhere. While at Hattusa we have large, mainly state and temple-related buildings that have been associated with scribal activity, albeit in the 13th century, at Ortaköy and Maşat in the early 14th century it seems more likely that houses belonging to scribes were used for some sort of scribal activity. At Karahna an appendage to the temple known as the Է ԳԻՏ.ԿԻՆ.ՏԻ was not occupied by the same staff as at Hattusa. All of this points to a possible uniqueness of the scribal practices at Hattusa as a capital city. We might also note that the tendencies in the provinces correspond to what we expect from scribal schools in much of the Ancient Near East – the ԷԴԲԲ.Ա is a family, domestic or other type of institution incidental to the function of the building which housed it, and the Է ԳԻՏ.ԿԻՆ.ՏԻ “House of the Craftpeople”, is a building where people actually do some physical work. It is Hattusa that is the exception.
